A catalogue of the mineral species in the National Museum of Natural History, Sofia (Part 2) Silicates

Chavdar KAROV, Iliya DIMITROV

KAROV Ch., DIMITROV I. 2004. A catalogue of the mineral species in the National Museum of Natural History, Sofia (Part 2) Silicates. – *Historia naturalis bulgarica*, **16**: 7-45.

Abstract. Part 2 of the catalogue includes mineral species, belonging to the biggest mineral class – Silicates, in the collection of the National Museum of Natural History Sofia. The collection comprises 356 species, 67 varieties, and 8 groups of not precisely determined mineral species.

Key words: Catalogue, Mineral species, Silicates, National Museum of Natural History Sofia

The new museum catalogue of the mineral species is based on the systematics of KOSTOV (1993), and the names of mineral species are given after MANDARINO (1999). The catalogue includes all specimens registered in the main museum fund until 2001 year. Part 2 of the mineral catalogue includes mineral species belonging to the biggest and most widespread mineral class – Silicates, according to the systematics of KOSTOV (1993). Here are presented 356 species in 5528 pieces, 67 varieties and 8 groups of not precisely determined mineral species.

Legend:

- Column: **Mineral classes, sub-classes, assemblages, groups, species and varieties**
- Names of mineral species are given after MANDARINO (1999) and KOSTOV (1993), following their Bulgarian translation in brackets.
- All mineral species are in bold. For example: **Quartz (Квартз)**
- The mineral varieties are in bold and italic. For example: - *Heliotrope (Хелиотроп)*
- Groups of not precisely determined minerals are in square brackets, bold and italic. For example: [***Scapolite***] [***Канопит***]

- Mineral species or variety followed by “П” means a species or variety of secondary importance in the sample. For example: **Метиноите П (Мерцниоит П) - Сасболонг П (Каводонг П)**

Column: **Localities, region, country**

- The list of localities follows the scheme: it always begins with localities in Bulgaria, followed by localities in other European countries, Asia, Africa, North and South America, Australia and Antarctica.
- All localities in one region are separated by commas.
- All localities in one country are separated by semicolons.
- Countries are separated by dots.
